Existing training processes and records  
Coaching programme  
Development programme
- **PROJECT MANAGEMENT**  
An essential part of developing and sustaining a solid safety culture; making progress visible and available to everyone; sharing successes and highlighting areas for more focused improvements

## SOLUTIONS THAT WORK FOR YOUR BUSINESS

Having a solid safety culture means *everyone* is able to recognize and demonstrate that *wherever you work* on a site, *you* can and should every day make a significant positive impact on the safety of the site, the organization, and the people also working at that site, as well as the community and environment in which that site is located.

Safety is about getting the right behaviours being demonstrated in the right place at the right time.

Simply by reducing the tolerance of workarounds, of poor practice improves safety culture; and, you don't have to be the person wielding the tool to affect safety. An office based member of staff leaving a piece of rubbish lying around which may then affect the operation of vital equipment is also affecting the safety of your operation.

The organisation provides the enablers for everyone to understand safety as it relates to employees, contractors and your team(s) on the site, e.g. Human Performance tools and techniques. The organisation ensures you *know* not to undertake a task that does not have clear safety considerations and contingency plans in place to support you and the site get the job done properly and safely; that you *know* to apply a questioning attitude, that you are sufficiently confident to *stop work if you feel unsure or unsafe* regardless of productivity pressures.

Once you're on the journey to a solid safety culture, you will still need to nurture it and support it with time and effort.
